

Measuring density (RP)

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know.

QUESTION		ANSWER	✓
1	State the two measurements needed to find the density of an object.	Mass and volume	☐
2	Describe how the volume of a cube can be found.	Measure the length of a side with a ruler and calculate length × width × height.	☐
3	Describe how the volume of a sphere can be found.	Measure the diameter, halve it to find the radius, then use volume = $\frac{4}{3} \times \pi \times r^3$.	☐
4	Describe how the volume of a liquid can be measured.	With a measuring cylinder.	☐
5	Convert 1 ml into cm ³ .	1 ml = 1 cm ³	☐
6	Describe how the mass of a liquid can be found.	Find the mass of an empty measuring cylinder, then of the cylinder with the liquid, and subtract.	☐
7	Name the method used to measure the volume of an irregularly shaped object.	The displacement method	☐
8	Describe how to read a measuring cylinder accurately.	Read the bottom of the meniscus at eye level.	☐
9	Name a measuring instrument that gives a more precise length than a ruler.	Vernier calipers	☐
