

Permanent and induced magnetism

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know.

	QUESTION	ANSWER	✓
1	Define attract.	When a force pulls two objects together.	☐
2	Define repel.	When a force pushes two objects apart.	☐
3	Name the two ends of a magnet.	The north pole and the south pole	☐
4	State what a north pole does to another north pole.	It repels it.	☐
5	State what a north pole does to a south pole.	It attracts it.	☐
6	Name three magnetic chemical elements.	Iron, nickel and cobalt	☐
7	Name an alloy that is magnetic.	Steel	☐
8	Define a permanent magnet.	A magnet that produces its own magnetic field.	☐
9	Define an induced magnet.	A material that becomes a magnet when placed in a magnetic field.	☐
10	Is the force between an induced magnet and a permanent magnet attractive or repulsive?	Always attractive	☐
11	State what surrounds a permanent magnet.	A magnetic field	☐
12	Describe how the strength of a magnetic field changes with distance from the magnet.	It gets weaker as the distance increases.	☐
13	State where the field of a permanent magnet is strongest.	At the poles.	☐

QUESTION		ANSWER	✓
14	State how field lines show where a magnetic field is strongest.	The lines are closest together.	☐
15	State the direction in which magnetic field lines point.	From the north pole to the south pole.	☐
16	Describe what a compass contains.	A small bar magnet that is free to rotate.	☐
17	Give two ways to show the shape of the magnetic field around a magnet.	Plotting compasses or iron filings	☐
18	Describe how to find the direction of the magnetic field around a magnet.	Use a plotting compass: its needle points along the field, from north to south.	☐
19	Name the pole at the end of a compass needle that points north.	A north pole	☐
20	State the type of magnetic pole near the Earth's geographic North Pole.	A magnetic south pole	☐
21	State the evidence that the Earth's core is magnetic.	A compass needle points in the same direction wherever it is on Earth.	☐
22	Define a magnetic field.	The region around a magnet where a force acts on another magnet or magnetic material.	☐
23	Is the force between two magnets a contact or a non-contact force?	Non-contact	☐
24	State what happens to an induced magnet when it is removed from the field.	It quickly loses its magnetism.	☐
25	State how the direction of a magnetic field is defined.	The direction of the force on a north pole placed at that point.	☐
