

Force and extension of a spring

A student investigates how the force on a spring affects its extension.

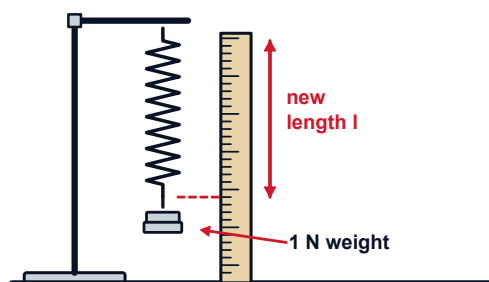

- 1** Hang the spring from a clamp stand next to a ruler.

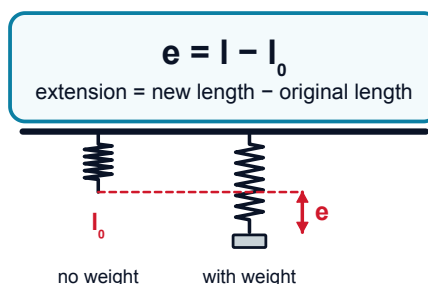

- 2** Measure the original length of the spring.

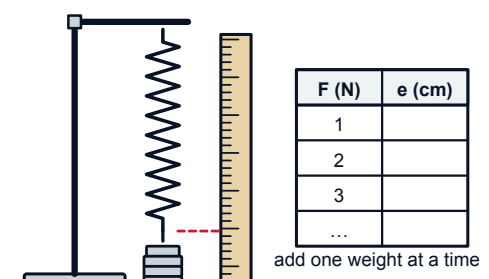

- 3** Hang a 1 N weight on the spring and measure its new length.

- 4** Calculate the extension: new length – original length.

- 5** Add more weights one at a time, finding the extension each time.

- 6** Plot a graph of force against extension.
