8 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**What is a line of best fit?**	One smooth line showing the overall trend of the data.	☐
2 ★	**Describe how a line of best fit should be drawn.**	One thin straight line or smooth curve, close to the points, with about as many above it as below.	☐
3	**State what must not be done when drawing a line of best fit.**	Joining the points dot-to-dot.	☐
4 ★	**What is an anomalous result?**	A result that does not fit the pattern of the others.	☐
5 ★	**Describe what you should do when you find an anomalous result.**	Check the recording and plotting, then repeat the measurement. If it is still anomalous, leave it out of the mean and the line of best fit.	☐
6	**State what a good conclusion must include.**	The relationship between the variables, supported by values with units.	☐
7 ★	**Describe the graph of two quantities that are directly proportional.**	A straight line through the origin.	☐
8	**What is peer review?**	When other scientists check the method, the evidence and the claims.	☐
