Thermal insulation (RP)

Energy
Paper 1 · Separate Physics only
6 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 3 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**Name the equipment needed to compare thermal insulators.**	A beaker of hot water, insulating materials, a thermometer and a stopwatch	☐
2 ★	**Comparing thermal insulators: name the independent variable.**	The type of insulating material	☐
3 ★	**Comparing thermal insulators: name the dependent variable.**	The temperature fall of the water in a set time	☐
4 ★	**Comparing thermal insulators: name three control variables.**	Any three from: volume of water, starting temperature, thickness of insulation, cooling time	☐
5	**Name the piece of equipment used to measure time.**	A stopwatch	☐
6	**Comparing thermal insulators: explain why each beaker must start at the same temperature.**	Hotter water cools faster, so the comparison would be unfair.	☐
