Waves in a ripple tank and on a string (RP)

Waves
Paper 2 · Combined and Separate
8 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 3 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**Name three properties of a wave that can be measured in a ripple tank.**	Frequency, wavelength and speed	☐
2	**A ripple tank casts bright and dark lines on the screen. State what they show.**	Bright lines: peaks. Dark lines: troughs.	☐
3	**Describe how waves are produced in a ripple tank.**	A motor makes a dipper vibrate up and down on the water surface.	☐
4 ★	**Describe how to measure the frequency of waves in a ripple tank.**	Count the waves passing a point in 10 s and divide by 10.	☐
5 ★	**Describe two ways to find the speed of the waves in a ripple tank.**	Frequency × wavelength Or: time a wave over a measured distance, then distance ÷ time	☐
6	**Describe how to find the frequency of a wave on a string.**	Read it from the signal generator.	☐
7 ★	**Describe how to measure the wavelength of a wave on a string.**	Measure the length of several loops and divide by the number of loops. Wavelength = 2 × the length of one loop.	☐
8	**Describe how to find the speed of a wave on a string.**	Multiply the frequency by the wavelength.	☐
