

Measuring density (RP)

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	State the two measurements needed to find the density of an object.	Mass and volume	☐
2	Describe how the volume of a cube can be found.	Measure one side with a ruler and cube it.	☐
3	Describe how the volume of a sphere can be found.	Measure the diameter, halve it to find the radius, then use $\text{volume} = \frac{4}{3} \times \pi \times r^3$.	☐
4	Describe how the volume of a liquid can be measured.	With a measuring cylinder.	☐
5	Convert 1 ml into cm^3 .	$1 \text{ ml} = 1 \text{ cm}^3$	☐
6 ★	Describe how the mass of a liquid can be found.	Weigh the measuring cylinder empty, then with the liquid in it, and subtract.	☐
7 ★	Name the method used to measure the volume of an irregularly shaped object.	The displacement method	☐
8 ★	Describe how to read a measuring cylinder accurately.	Read the bottom of the meniscus at eye level.	☐
9	Name a measuring instrument that gives a more precise length than a ruler.	Vernier calipers	☐
