DO NOW, AO1 REVISION

Reflection and refraction of light (RP)

Waves
Paper 2, Separate Physics only
8 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**Describe how the normal is drawn in a ray diagram.**	At 90° to the boundary, where the ray meets it.	☐
2 ★	**State how the angle of incidence is measured.**	Between the incident ray and the normal.	☐
3	**State how the angle of reflection is measured.**	Between the reflected ray and the normal.	☐
4 ★	**State how the angle of refraction is measured.**	Between the refracted ray and the normal.	☐
5 ★	**State how the angle of reflection compares with the angle of incidence.**	They are equal.	☐
6	**Name the equipment used to produce a narrow ray of light.**	A ray box	☐
7 ★	**Explain why a narrow ray is used when investigating reflection and refraction.**	Its position can be marked more accurately.	☐
8	**Name the instrument used to measure the angles in a ray diagram.**	A protractor	☐
