DO NOW, REQUIRED PRACTICAL

Density of a liquid

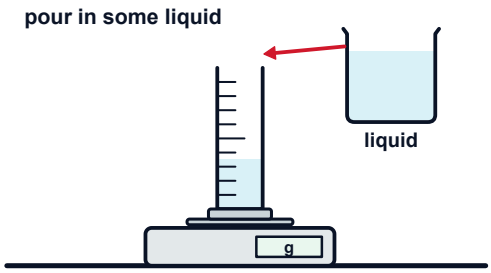

Particle model of matter
Paper 1, Combined and Separate
5 steps

A student measures the density of a liquid.

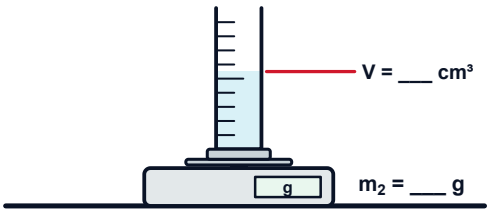

1 Put an empty measuring cylinder on a balance and record its mass.

2 Pour some of the liquid into the measuring cylinder.

3 Record the volume of the liquid and the new mass on the balance.

4 Subtract the two masses to find the mass of the liquid.

$$m = m_2 - m_1$$

(with liquid) − (empty cylinder)

m_2 = mass with liquid, m_1 = empty

5 Calculate the density: mass ÷ volume.

$$\rho = m \div V$$

density (g/cm³) = mass (g) ÷ volume (cm³)

m = mass of liquid, V = volume of liquid
