DO NOW, REQUIRED PRACTICAL

Force and extension of a spring

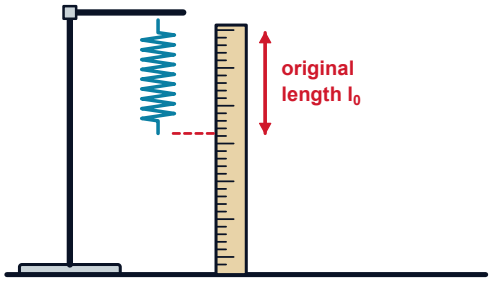

Forces
Paper 2, Combined and Separate
6 steps

A student investigates how the force on a spring affects its extension.

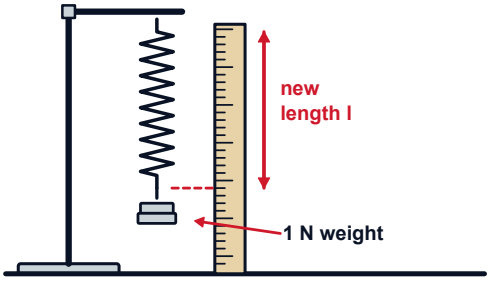

1 Hang the spring from a clamp stand next to a ruler.

2 Measure the original length of the spring.

3 Hang a 1 N weight on the spring and measure its new length.

4 Calculate the extension: new length − original length.

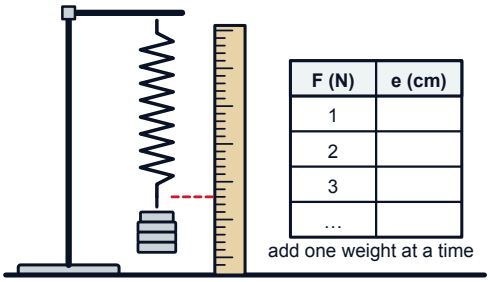

$$e = l - l_0$$

extension = new length − original length

no weight with weight

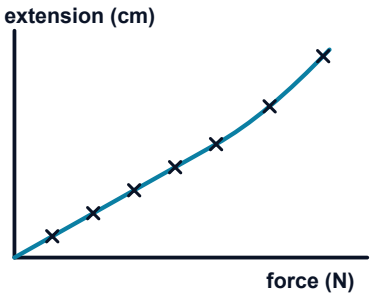

5 Add more weights one at a time, finding the extension each time.

F (N)	e (cm)
1	
2	
3	
…	

add one weight at a time

6 Plot a graph of extension against force.

extension against force
