

Variables and planning

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know.

	QUESTION	ANSWER	✓
1	What is the independent variable?	The one variable that is deliberately changed.	☐
2	What is the dependent variable?	The variable that is measured.	☐
3	What is a control variable?	A variable kept the same to make the test fair.	☐
4	Explain why control variables must be kept the same.	If two variables change together, you cannot tell which one caused the result.	☐
5	What is continuous data?	Number data that can take any value on a scale.	☐
6	What is categoric data?	Data sorted into named groups or types.	☐
7	Give two examples of continuous variables.	Any two from: length, time, temperature, mass	☐
8	Give two examples of categoric variables.	Any two from: material, colour, brand, type of surface	☐
9	State the form of a good research question.	"How does X affect Y?" (X: independent variable, Y: dependent variable)	☐
10	State the minimum number of trials for each value of the independent variable.	Three	☐
11	Describe what a good method allows another scientist to do.	Repeat the investigation by following its steps.	☐
