DO NOW, AO1 REVISION

Permanent and induced magnetism

Magnetism and electromagnetism
Paper 2, Combined and Separate
22 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 8 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**Name the two ends of a magnet.**	The north pole and the south pole	☐
2	**State what a north pole does to another north pole.**	It repels it.	☐
3	**State what a north pole does to a south pole.**	It attracts it.	☐
4 ★	**Name three magnetic chemical elements.**	Iron, nickel and cobalt	☐
5	**Name an alloy that is magnetic.**	Steel	☐
6	**What is a permanent magnet?**	A magnet that produces its own magnetic field.	☐
7 ★	**What is an induced magnet?**	A material that becomes a magnet when placed in a magnetic field.	☐
8 ★	**Is the force between an induced magnet and a permanent magnet attractive or repulsive?**	Always attractive	☐
9	**State what surrounds a permanent magnet.**	A magnetic field	☐
10	**Describe how the strength of a magnetic field changes with distance from the magnet.**	It gets weaker as the distance increases.	☐
11 ★	**State where the field of a permanent magnet is strongest.**	At the poles.	☐
12 ★	**State how field lines show where a magnetic field is strongest.**	The lines are closest together.	☐

	QUESTION	ANSWER	✓
13 ★	**State the direction in which magnetic field lines point.**	From the north pole to the south pole.	☐
14	**Describe what a compass contains.**	A small bar magnet that is free to rotate.	☐
15	**Give two ways to show the shape of the magnetic field around a magnet.**	Plotting compasses or iron filings	☐
16	**Describe how to find the direction of the magnetic field around a magnet.**	Use a plotting compass: its needle points along the field, from north to south.	☐
17	**Name the pole at the end of a compass needle that points north.**	A north pole	☐
18 ★	**State the evidence that the Earth's core is magnetic.**	A compass needle lines up north–south when no other magnet is near, so the Earth has its own magnetic field.	☐
19 ★	**What is a magnetic field?**	The region around a magnet where a force acts on another magnet or magnetic material.	☐
20	**Is the force between two magnets a contact or a non-contact force?**	Non-contact	☐
21	**State what happens to an induced magnet when it is removed from the field.**	It quickly loses its magnetism.	☐
22	**State how the direction of a magnetic field is defined.**	The direction of the force on a north pole placed at that point.	☐
