DO NOW, AO1 REVISION

Precision, accuracy and uncertainty

Working scientifically
Both papers, Combined and Separate
9 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**Define precision.**	How close repeated measurements are to each other.	☐
2 ★	**Define accuracy.**	How close a measurement is to the true value.	☐
3 ★	**Define the resolution of a measuring instrument.**	The smallest change the instrument can detect.	☐
4	**Define uncertainty.**	The interval within which the true value can be expected to lie.	☐
5	**State how the mean of a set of repeated readings is calculated.**	Add up the readings, then divide by the number of readings.	☐
6	**Define range.**	The maximum and minimum values of the independent or dependent variables.	☐
7 ★	**State how uncertainty is calculated from a set of repeated readings.**	Uncertainty = (largest reading − smallest reading) ÷ 2	☐
8	**Three readings are close together but far from the true value. Describe them using the words precise and accurate.**	They are precise but not accurate.	☐
9	**Do repeated measurements help you judge precision or accuracy?**	Precision	☐
