DO NOW, REQUIRED PRACTICAL

Acceleration and force

Forces
Paper 2, Combined and Separate
6 steps

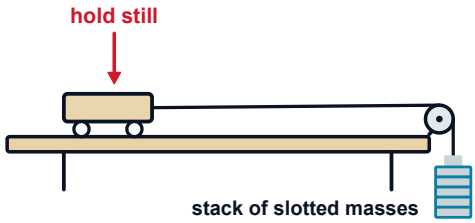

A student investigates how the force on a trolley affects its acceleration.

1 Attach a string to a trolley and pass it over a pulley at the end of the bench.

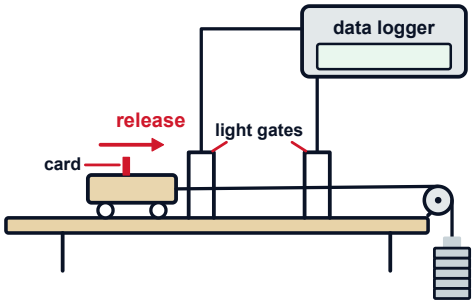

string over the pulley at the end of the bench

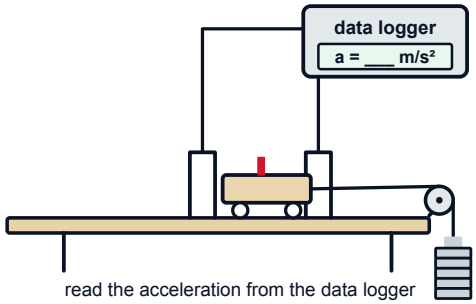

2 Hang a stack of slotted masses on the end of the string and hold the trolley still.

3 Release the trolley so that it passes through two light gates.

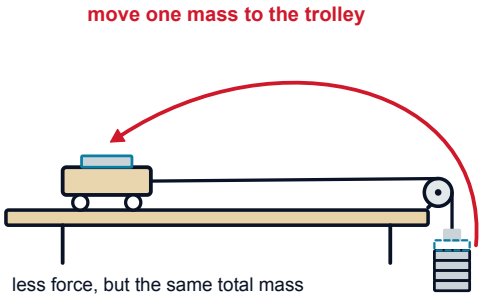

4 Record the acceleration calculated by the data logger.

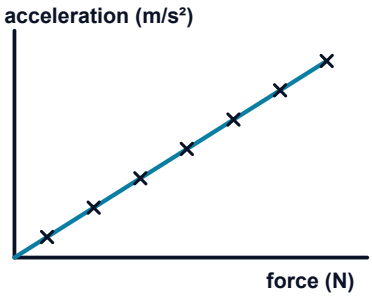

read the acceleration from the data logger

5 Move one slotted mass from the stack to the trolley to reduce the force, then repeat.

less force, but the same total mass

6 Plot a graph of acceleration against force.

force = weight of the hanging masses
