DO NOW, REQUIRED PRACTICAL

Density of a regular solid

Particle model of matter
Paper 1, Combined and Separate
4 steps

A student measures the density of a rectangular metal block.

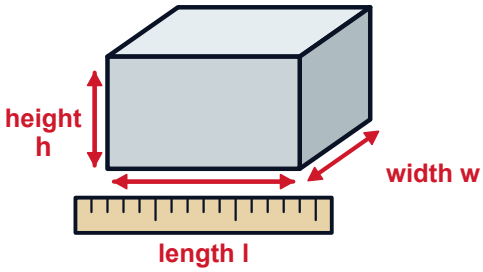

1 Measure the mass of the block with a balance.

metal block
mass m = ___ g

measure the mass

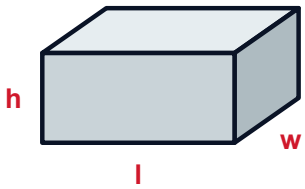

2 Measure the length, width and height of the block with a ruler.

3 Calculate the volume: length × width × height.

$$V = l \times w \times h$$

volume (cm³) = length × width × height

4 Calculate the density: mass ÷ volume.

$$\rho = m \div V$$

density (g/cm³) = mass (g) ÷ volume (cm³)

use m from step 1 and V from step 3

Note: The two measuring steps can be done in either order.
