Forces
Paper 2 · Combined and Separate
14 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**Define weight.**	The force acting on an object due to gravity.	☐
2	**State why objects experience weight on Earth.**	The Earth's gravitational field attracts them.	☐
3 ★	**Explain why objects experience different weights on different planets.**	Each planet has a different gravitational field strength.	☐
4	**Does the mass of an object change if it is moved to another planet?**	No	☐
5	**Does the weight of an object change if it is moved to another planet?**	Yes: the gravitational field strength is different.	☐
6	**State the standard unit of weight.**	Newton (N)	☐
7	**State the standard unit of mass.**	Kilogram (kg)	☐
8 ★	**State the standard unit of gravitational field strength.**	Newton per kilogram (N/kg)	☐
9	**State the mathematical relationship between weight and mass.**	Weight is directly proportional to mass ($W \propto m$).	☐
10	**Describe how the weight of an object depends on its mass.**	Doubling the mass doubles the weight (direct proportion).	☐
11 ★	**What is the centre of mass of an object?**	The single point where the weight of the object can be considered to act.	☐
12	**State the equation linking weight, mass and gravitational field strength.**	weight = mass × gravitational field strength ($W = m\,g$)	☐
13	**Name the instrument used to measure weight.**	A newtonmeter (calibrated spring balance)	☐

	QUESTION	ANSWER	✓
14	**State the gravitational field strength at the surface of the Earth.**	About 9.8 N/kg	☐
