Infrared radiation (RP)

Waves
Paper 2 · Combined and Separate
10 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 5 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**Describe a Leslie cube.**	A hollow metal cube with faces of different colours and textures, filled with hot water.	☐
2	**Infrared emission from surfaces: name the independent variable.**	The type of surface	☐
3 ★	**Infrared emission from surfaces: name the dependent variable.**	The amount of infrared radiation emitted	☐
4 ★	**Infrared emission from surfaces: name the control variables.**	Temperature, area and material of the surface, and its distance from the detector	☐
5 ★	**Describe how the infrared radiation emitted by a surface is measured.**	With an infrared detector at a fixed distance.	☐
6	**State how the reading on an infrared thermometer depends on the radiation it detects.**	The more radiation detected, the higher the reading.	☐
7	**All faces of a Leslie cube are at the same temperature. Explain why the infrared readings differ.**	Different surfaces emit at different rates: matt black emits most, shiny silver least.	☐
8 ★	**State the type of surface that is the best emitter of infrared radiation.**	Matt black	☐
9	**State the type of surface that is the worst emitter of infrared radiation.**	Shiny silver	☐
10 ★	**State the type of surface that is the best absorber of infrared radiation.**	Matt black	☐
