Measuring density (RP)

Particle model of matter
Paper 1 · Combined and Separate
8 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 3 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**State the two measurements needed to find the density of an object.**	Mass and volume	☐
2	**Describe how the volume of a cube can be found.**	Measure one side with a ruler and cube it.	☐
3	**Describe how the volume of a liquid can be measured.**	With a measuring cylinder.	☐
4	**Convert 1 ml into cm^3.**	1 ml = 1 cm^3	☐
5	**Describe how the mass of a liquid can be found.**	Weigh the measuring cylinder empty, then with the liquid in it, and subtract.	☐
6 ★	**Name the method used to measure the volume of an irregularly shaped object.**	The displacement method	☐
7 ★	**Describe how to read a measuring cylinder accurately.**	Read the bottom of the meniscus at eye level.	☐
8	**Name an instrument for measuring length that has a better resolution than a ruler.**	Vernier calipers	☐
