Newton's laws

Forces
Paper 2 · Combined and Separate
12 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 6 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**State Newton's first law.**	If the resultant force is zero, a stationary object stays still and a moving object keeps the same velocity.	☐
2 ★	**An object travels at constant velocity. Is there a resultant force on it?**	No	☐
3 ★	**Define inertia.**	The tendency of an object to continue in its state of rest or of uniform motion.	☐
4 ★	**State Newton's second law.**	Acceleration is proportional to the resultant force and inversely proportional to the mass (F = m a).	☐
5	**Describe how the acceleration of an object depends on the resultant force.**	Acceleration is directly proportional to the resultant force.	☐
6	**What is inertial mass?**	A measure of how difficult it is to change the velocity of an object.	☐
7	**An object is changing velocity. Is there a resultant force on it?**	Yes	☐
8 ★	**State Newton's third law.**	When two objects interact, the forces they exert on each other are equal and opposite.	☐
9	**State the equation linking resultant force, mass and acceleration.**	resultant force = mass × acceleration (F = m a)	☐
10 ★	**For a constant force, state how acceleration depends on mass.**	Acceleration is inversely proportional to mass.	☐
11	**A car travels at a steady speed along a straight road. Compare the driving force and the resistive forces.**	They are balanced (equal and opposite).	☐
12	**Give an example of Newton's third law.**	You push on a wall; the wall pushes back on you with an equal and opposite force.	☐
