Particle motion in gases

Particle model of matter
Paper 1 · Combined and Separate
5 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 3 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**The average kinetic energy of the particles of a gas increases. State what happens to its temperature.**	The temperature increases.	☐
2 ★	**Describe the cause of gas pressure.**	Gas particles colliding with the walls of the container.	☐
3	**A gas is heated at constant volume. State what happens to its pressure.**	The pressure increases.	☐
4 ★	**Describe the motion of the molecules in a gas.**	They are in constant random motion.	☐
5 ★	**Explain, using particles, why heating a gas at constant volume increases its pressure.**	The particles move faster, so they hit the walls more often and with more force.	☐
