Pressure in gases

Particle model of matter
Paper 1 · Separate Physics only
8 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 3 starred (★) questions first.

	QUESTION	ANSWER	✓
1	**The pressure on a gas is increased at constant temperature. State what happens to its volume.**	The volume decreases.	☐
2 ★	**A gas is compressed at constant temperature. State what happens to its pressure.**	The pressure increases.	☐
3 ★	**Explain why increasing the volume of a gas decreases its pressure.**	The particles are more spread out, so they hit the walls less often.	☐
4 ★	**State the standard unit of pressure.**	Pascal (Pa)	☐
5	**State the standard unit of volume.**	Cubic metre (m^3)	☐
6	**State the equation for a fixed mass of gas at constant temperature.**	pressure × volume = constant (p V = constant)	☐
7	**State the direction of the net force that gas pressure exerts on a container wall.**	At right angles to the wall.	☐
8	**The volume of a gas is doubled at constant temperature. State what happens to its pressure.**	It halves.	☐
