Resultant forces, work done and energy transfer

Forces
Paper 2 · Combined and Separate
16 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 4 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**Define resultant force.**	The single force that has the same effect as all the forces acting on an object.	☐
2	**Describe how a resultant force is calculated.**	By adding all the forces on the object as vectors.	☐
3	**Two forces act in the same direction. Describe how to find the size of the resultant force.**	Add the two forces together.	☐
4	**Two unequal forces act in opposite directions. State the direction of the resultant force.**	The direction of the larger force	☐
5	**Two forces act in opposite directions. Describe how to find the size of the resultant force.**	Subtract the smaller force from the larger force.	☐
6 ★	**State the resultant force when the forces on an object are balanced.**	Zero (0 N)	☐
7 ★	**State the standard unit of work done.**	Joule (J)	☐
8	**State the standard unit of force.**	Newton (N)	☐
9	**State the standard unit of distance.**	Metre (m)	☐
10	**State a unit that is equivalent to 1 J of work done.**	1 N m	☐
11 ★	**Work is done against friction. Name the energy store that increases.**	The thermal energy store	☐
12	**Work is done on an object against friction. State what happens to its temperature.**	Its temperature rises.	☐

	QUESTION	ANSWER	✓
13	**State the equation linking work done, force and distance.**	work done = force × distance moved in the direction of the force (W = F s)	☐
14	**State how much work is done when a force of 1 N moves an object through 1 m.**	1 J	☐
15	**Describe what a free body diagram shows.**	All the forces acting on one object, drawn as arrows.	☐
16	**State what is meant by resolving a force.**	Splitting it into two components at right angles that together have the same effect.	☐
