Transverse and longitudinal waves

Waves
Paper 2 · Combined and Separate
18 questions

Cover the answers. Answer each question out loud or on paper, then check. Tick the ones you know. Learn the 6 starred (★) questions first.

	QUESTION	ANSWER	✓
1 ★	**State what waves transfer.**	Energy	☐
2 ★	**State what waves do not transfer.**	Matter	☐
3	**Name the material that a wave travels through.**	A medium	☐
4	**Name a repeated back-and-forth motion.**	An oscillation	☐
5	**State what oscillates in a water wave.**	The water particles (up and down)	☐
6	**State what oscillates in a sound wave in air.**	The air particles	☐
7	**State what oscillates in a light wave.**	Electric and magnetic fields	☐
8	**Name the two types of wave.**	Transverse waves and longitudinal waves	☐
9 ★	**What is a transverse wave?**	A wave in which the oscillations are perpendicular to the direction of energy transfer.	☐
10 ★	**What is a longitudinal wave?**	A wave in which the oscillations are parallel to the direction of energy transfer.	☐
11 ★	**What type of wave is sound?**	Longitudinal	☐
12	**What type of wave is light?**	Transverse	☐

	QUESTION	ANSWER	✓
13 ★	**State what labels A and B show on this longitudinal wave.** 	A: a compression B: a rarefaction	☐
14	**Give an example of a transverse wave.**	Ripples on water (or light)	☐
15	**Give an example of a longitudinal wave.**	Sound waves in air	☐
16	**Describe evidence that water waves transfer energy without moving the water along.**	A floating object bobs up and down but is not carried along.	☐
17	**What is a compression in a longitudinal wave?**	A region where the particles are closer together.	☐
18	**What is a rarefaction in a longitudinal wave?**	A region where the particles are further apart.	☐
