Infrared radiation and surfaces

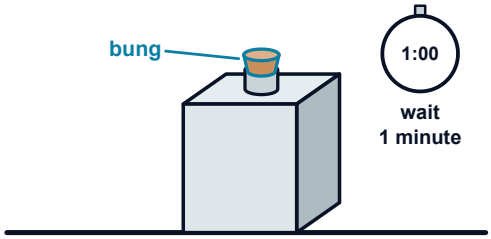

Waves
Paper 2 · Combined and Separate
5 steps

A student compares how much infrared radiation different surfaces emit.

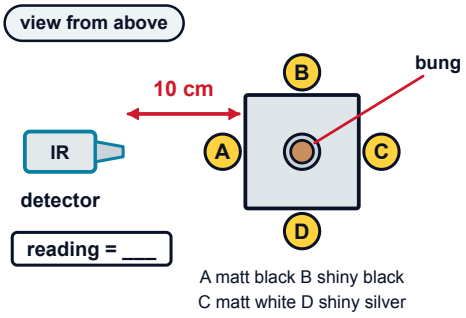

1 Fill a Leslie cube with hot water and push the bung in.

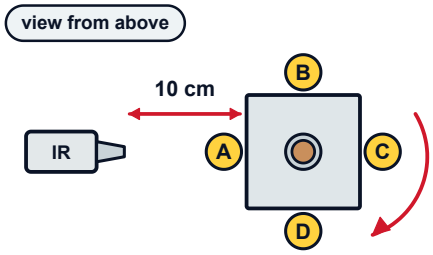

2 Leave it for a minute so that every face reaches the same temperature.

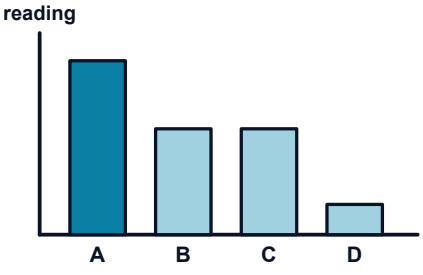

3 Hold an infrared detector 10 cm from one face and record the reading.

4 Repeat for each of the other faces, keeping the detector the same distance away.

5 Compare the readings: the highest reading shows the best emitter.
